The component charged with carrying all that weight is the air suspension. Weighing in at just under 6,000 pounds, just keeping the Expedition off the ground is a monumental task. Add to that a few people and cargo and you are really asking a lot of your suspension to begin with. The OEM air suspension in your car supports all this weight by using rubber air bags attached to the struts as opposed to mechanical coils.

How do I know if the expedition we are looking at has the air suspension? We are looking at 2 limited...which I think have the air standard and then an eddie bauer. All 3 are 2005 models. One of the limiteds looks low in the back then in the front, so I am guessing it has it and there is a problem with the air suspension. Thanks
